

SENIOR COMMODITY MANAGER

This supply chain expert will manage core technology commodities. This is an exceptionally technical position. This senior commodity manager will identify partnerships, qualification of suppliers and develop supply and product strategies for the core technology commodities. This is a pivotal, higher-ranking individual contributor role.

Qualifications:

1. The client is adamant this individual must have a BS degree in engineering, (preferably Electrical) and have worked in engineering as an engineer before beginning a supply chain career.
2. Commodity expertise will be in: High voltage power suppliers, hoops, linacs, Tx Detectors, X-ray tubes, and X-ray cables.
3. Significant recent expertise with Supply Chain contracting for High voltage power suppliers, hoops, linacs, Tx Detectors, X-ray tubes, and X-ray cables.
4. Adept at managing the complete process of developing work scope for emerging Engineering development needs, developing Statement of Work, evaluating and bidding potential design service providers, negotiating design subcontractors and effectively managing these subcontracts through their life cycle
5. Ability to interpret engineering drawings
6. Significant experience in developing definition of SOWs and NPI design requirements
7. OEM electromechanical capital equipment experience
8. Expertise managing technical global supply partners

Location: Chelmsford / Bedford MA.
relocation is available
